The LEQVIO® Assist Patient Support Program

A guiding hand in your treatment with LEQVIO® (inclisiran injection)

Now that you've been prescribed LEQVIO®, you have access to all the support services offered with LEQVIO® Assist. This booklet is your guide to all the various ways we can support you through your treatment journey.

LEQVIO® is used in adults to further lower your LDL ("bad" cholesterol) levels. It is for patients who are currently taking a statin (a medicine used to treat high cholesterol), sometimes in combination with another cholesterol-lowering medicine.

LEQVIO® is used in addition to lifestyle changes, including diet in patients who have:

- Heterozygous familial hypercholesterolemia (HeFH) (an inherited genetic disorder that causes extremely high cholesterol levels), or
- Non-familial hypercholesterolemia (a condition that affects the way your body processes cholesterol) with atherosclerotic cardiovascular disease (a hardening of the arteries)

The effect of LEQVIO® on heart problems such as heart attacks, stroke, or death is not known.
